## MASTER KEYED Admin Access with User Keys

The Kensington Master Keyed locking system gives IT administrators universal access to unlock any piece of equipment with a master key while allowing employees to carry their own individual locks and keys. This gives employees the power to protect their laptops with personal locks that can be used anywhere in the office or on the go.
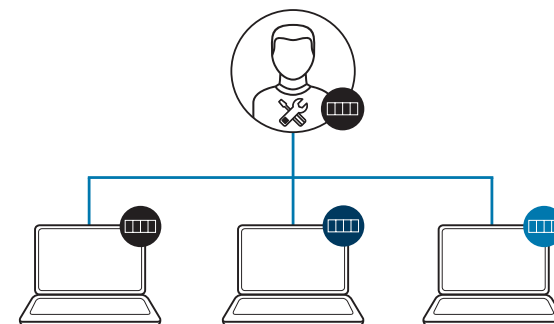

## SINGLE KEYED Admin-Only Access

Implement high-level, convenient on-site security by physically securing company equipment using identical locks with keys that are restricted to IT staff. One master key opens them all, giving the IT manager ultimate control and access.

## LIKE KEYED Each Key Opens Every Lock

Provide wider flexibility and freedom to access equipment by offering a department, office or lab identical shared keys. This solution offers a solid layer of security against non-employee theft without restricting employee access and productivity, making efficient use of department budgets.

## MASTER CODED Admin Access with User Combination

Combination locks are ideal for field based staff or remote locations where keyed locks aren't practical. ClickSafe® Master Coded Locks allow users to set their own unique combination code. Administrators can overcome the users code using a ClickSafe® ComboGenie.

## Create the Right Impression

Awkward angles... poor positioning...
lousy lighting...

Built in laptop webcams can often hold your team
back from looking professional during video calls.

In a world where video conferencing is crucial to
your day-to-day business, accessories that show
you in the best light are essential.
